

Horizons Advisory LMP

COMPREHENSIVE NODAL INSIGHTS

In the increasingly complex landscape of North American power markets, understanding the intricacies of transmission and pricing is crucial for informed decision-making. The Horizons Advisory LMP Service is an enhanced version of the Horizon's Energy's Advisory Outlook, offering a forward-looking, nodal-level outlook that integrates the critical elements of regional power economics and locational impacts. This enriched data is invaluable for those looking to make strategic investments in the energy market.

Extensively researched, benchmarked, and analyzed by industry professionals, Horizons LMP delivers hourly price forecasts for a set of user-defined price nodes, capturing the locational differences in costs due to congestion and transmission losses. The forecast spans from the current year through 2050, providing a long-term view that's essential for strategic planning and risk management. By integrating nodal pricing with zonal simulations, the Horizons LMP reflects the broader market impacts of fuels, emissions, transmission dynamics, demand fluctuations, and emerging technologies on specific locations in the grid.

Use Cases

- Screen and evaluate local solar, wind, storage, and hybrid projects with precise, location-specific pricing data.
- Identify and manage risks associated with locational price differentials, ensuring more accurate financial planning and investment decisions.
- Understand the impacts of curtailments on the system and identify economic opportunities or risks in power generation and transmission.
- Use detailed data to evaluate transmission paths, including Financial Transmission Rights (FTR), Congestion Revenue Rights (CRR), and Auction Revenue Rights (ARR).

Features

- Hourly nodal price forecasts
- User-defined price nodes
- Detailed data and reporting

About Yes Energy's Partnership with Horizons Energy

Yes Energy partners closely with Horizons Energy to offer customers accurate long-term, energy market outlooks by integrating extensively researched market fundamentals with advanced modeling tools, supported by decades of market, financial, regulatory, and forecasting domain expertise.
